SUMMARY

Technical game designer and developer with studio experience in both Unity (C#) and Unreal Engine 5 (C++/Blueprints). Built gameplay systems, NPC AI and procedural generation across three studio roles, with measurable optimization results (up to 60% memory reduction). Currently leading a 6-person team as Technical Designer and Project Manager on a co-op game, targeting a playable demo in January 2027.

SKILLS

Engines: Unity, Unreal Engine 5

Programming: C#, C++, Blueprints, Object-Oriented Programming, Design Patterns

Gameplay & Systems: Gameplay Programming, NPC AI (Behavior Trees, Blackboard, AI Perception), Procedural Generation, Multiplayer, VR Development, Optimization, Editor Tooling

Design & Production: Game Design, Systems Design, Playtesting & Iteration, UX, Project Management

Languages: English (C1), Turkish (Native)

EXPERIENCE

Game Developer Intern, Eudemonia Games | 09/2024 – 02/2025

AI-powered RPG, Unity (C#), team of 10+

- Extended a random dungeon generator into a runtime procedural dungeon generation system.
- Built a parser that converted AI-generated text output into data driving dungeon generation.
- Reduced memory load of the generation system by up to 40%.
- Developed custom Unity Inspector tooling to make systems faster and easier for the team to use.

Game Developer, Avilan | 06/2024 – 02/2025

PC tavern simulation & VR endless runner, Unreal Engine 5 (C++/Blueprints), team of 6

- Built NPC AI using Behavior Trees, Blackboard and AI Perception.
- Created a data-driven bartending system with Data Tables and debug tools for designer-friendly iteration.
- Implemented VR input, events and interaction logic in C++ and Blueprints.
- Reduced memory load by up to 60% by rebuilding Blueprint systems in C++.

Game Developer, Aquila Games | 03/2024 – 09/2024

2D arcade barbershop simulation for PC and mobile, Unity (C#), team of 10+

- Developed core gameplay mechanics and NPC behavior, including navigation and pathfinding systems.
- Refactored and optimized existing scripts within a large codebase.
- Designed quick-time-event puzzles and iterated on them based on playtest feedback.

PROJECTS

Brothers on Case, Technical Designer & Project Manager | 01/2025 – Present

Co-op game, Unreal Engine 5, team of 6

- Leading a 6-person team; managing scope, task planning and production toward a playable demo in January 2027.
- Built a 2-player listen-server multiplayer foundation, with developer settings for single-player testing.
- Built a UI-based Evidence Board system, fully replicated and persistent across level transitions.

FuTSIO, Solo Developer | Unreal Engine 5, C++

- Multiplayer project in C++; worked on memory management, design patterns and engine source code.

Quest Master, Lead Developer | Unreal Engine 5

- Led programming for a team project; planned tasks in HacknPlan and built AI, data management and debugging tools.

MindQuake, Game Developer | TechCamp Istanbul 2024

- 48-hour serious game teaching panic-attack control to earthquake-related PTSD patients, built with a psychologist.

EDUCATION

B.A. Digital Game Design, Bahcesehir University | 2022 – 2026

- GPA: 3.84 / 4.00 | Graduated as 2nd in the Faculty of Communication (Salutatorian)
- University Entrance Exam (YKS 2022): Ranked 14,123rd out of 1.4M+ candidates in the Science & Mathematics track (top 1%)
- Relevant coursework: Advanced Game Development (UE5 + C++), Multiplayer Game Development, Virtual Reality Technologies, Game Production: Pipeline & Studio, Game Psychology, User Experience Design

CERTIFICATES

- Refining and Polishing Game Feel Bootcamp | Alexander Brazie, Game Design Skills | 2026
